Schedule 1 – Operating area

[This page is intentionally blank]

Schedule 2 – Performance standards

The *licensee* must comply with the standards, principles and reporting requirements as set out below.

1. POTABLE WATER

1.1 Potable water system – pressure and flow standards

1.1.1 The *water service works* provided by the *licensee*, for the purpose of *water supply services*, shall be designed, constructed, operated and maintained to provide continuity of pressure and flow for services in accordance with the following standards.

Pressure and flow standards

| Area | Minimum Static Pressure (metres of water) | Maximum Static Pressure (metres of water) | Minimum Flow (litres per minute) |
|--------------------------------|---|---|----------------------------------|
| Water Corp Perth Metropolitan | 15 | 100 | 20 |
| Water Corp Country Urban Areas | 13 | 100 | 20 |
| All other water licences | 15 | 100 | 20 |

1.2 Potable water system – pressure and flow exemptions

1.2.1 The licensee must notify:

- (a) new customers upon purchase of the affected property as soon as practicable; and
- (b) existing customers at least annually

that pressure and flow of the water supplied falls outside of the standard pressure and flow range set out in section 1.1 of this Schedule.

1.2.2 The notification set out in section 1.2.2 must include:

- (a) the pressure and flow range; and
- (b) further information about how to manage the exempt pressure and flow.

1.3 Water restrictions

1.3.1 The *licensee* must notify the *ERA* annually of any restrictions applied in accordance with the *Water Services Regulations 2013* to a *potable water* supply, detailing restrictions by scheme, type (severity), duration, start date and number of services affected.

2. NON-POTABLE WATER

Not used.

3. SEWERAGE

3.1 Sewerage service standards

Not used.

4. DRAINAGE

4.1 Drainage service standards

4.1.1 The *licensee* must operate, manage, maintain, plan and construct its drains and drainage schemes as set out below, and shall consult in relation to such activities as required by this Schedule.

4.1.2 Urban drainage scheme infrastructure provided by the *licensee* for the purpose of protection against flooding shall be designed, constructed, operated and maintained such that the peak flows of stormwater runoff from rainfall events can be accepted into and will not overflow from the system in accordance with the following standard.

Drainage service standard

| | How is it measured | Performance indicator / targets |
|--|--|---|
| Drainage – Design of new urban infrastructure. | Desk audit of scheme to test if design of new urban drainage scheme infrastructure protects against flooding from peak flows of stormwater runoff from rainfall events with intensities up to – Residential – 5 year average recurrence interval Commercial – 10 year average recurrence interval. | 100% of schemes audited comply with the standard. |

4.1.3 In the above table the meaning of the term “average recurrence interval” shall be consistent with the discussion on probability concepts for flood estimation and rainfall intensity – frequency – duration estimation, as contained in Books 1 & 2 respectively of the Institution of Engineers Australia publication, Australian Rainfall and Runoff (1987).

4.1.4 In planning and designing urban infrastructure, the *licensee* must have due regard to the principles, concepts and recommendations of Australian Rainfall and Runoff (1987).

4.1.5 If, prior to 1 January 1996, the *licensee* constructed drainage infrastructure to levels of service standards which were less than those specified in this Schedule then there will be no obligation under this *licence* for the *licensee* to upgrade any infrastructure existing as at 1 January 1996, to meet the above standards where there have been no instances of flooding confirmed to be due to the under capacity of the infrastructure to meet those standards. Where there have been instances of flooding confirmed to be due to under capacity of infrastructure to meet the standards of this Schedule, the *licensee* must upgrade the infrastructure to those standards or must take such action as agreed with affected *customers*.

- 4.1.6 The drainage system will accept drainage water from Local Government works, but will not be required under this *licence* to be upgraded to accept any additional drainage water.
- 4.1.7 Notwithstanding that the *licensee's* urban drainage infrastructure shall itself be designed to the capacity standards listed in this Schedule, in planning and designing such infrastructure the *licensee* must have due regard to the major/minor concept of drainage design discussed in Book 8, 1.5.1 of Australian Rainfall and Runoff (1987). Such due regard will be adequately demonstrated:
- (a) in the case of it undertaking, commissioning or accepting a design for new drainage infrastructure, by the *licensee* ensuring that the local authorities involved have been made aware of the predicted response of the combined major/minor system to major storm events, for the information of those authorities in relation to their responsibilities for the establishment and management of the major (as described in Australian Rainfall and Runoff (1987)) elements of the major/minor system infrastructure; and
 - (b) in the case of it undertaking a capacity review of an existing *licensee* drainage scheme, by the *licensee* causing a broad assessment to be made of the behaviour of the combined major/minor system under major event conditions, and conveying the conclusions of such assessment to the local authorities involved, for the information of those authorities in relation to their responsibilities for management of the major (as described in Australian Rainfall and Runoff (1987)) elements of the major/minor system infrastructure.
- 4.1.8 The *licensee* will ensure all new rural drainage infrastructure complies with the Rural Drainage Manual of Standards 1977. The *licensee* shall endeavour to operate and maintain its rural drainage infrastructure so that the period of inundation to land abutting a drain that forms part of the system shall be a maximum of 72 hours. If the period of inundation should exceed 72 hours the *licensee* must carry out an investigation of the adequacy of those operations and maintenance procedures. An exception is those low lying land areas where the contours make this impossible or where detention basins have been constructed for the retention of water for longer periods. Low lying areas include those areas within lots which abut the drain, which would normally not readily drain to the drain. However, land that would normally drain to the drain, but where this is prevented by high flow levels in the drain, will be subject to the maximum 72 hour inundation period. This inundation period shall apply provided multiple storm events do not increase flow levels in the drains above the rural drainage infrastructure discharge points. The drainage system serves the general drainage requirements of rural properties in the Drainage Services Control Areas and there will be no obligation under this *licence* for the *licensee* to extend the service to other properties, "or serve urban drainage development within the rural areas."
- 4.1.9 The following flood protection works will be operated and maintained to cater for the peak flows of stormwater runoff from individual rainfall events set out below.

| Flood protection works | Location | Level of protection (average recurrence interval) |
|------------------------|--|---|
| Preston River levees | Bunbury – Leschenault Inlet to Picton Bridge | 1 in 100 year |
| Vasse River Diversion | Busselton | 1 in 20 year |

5. IRRIGATION

5.1 Irrigation service standards

- 5.1.1 The *licensee* must supply water that is suitable for irrigation purposes.
- 5.1.2 The *licensee* must provide at least 5 *business days'* notice to a *customer* of any planned service interruption.
- 5.1.3 The licensee must comply with the standards and principles as set out below.

Irrigation service standards

| Irrigation Water Quality | Percentage of customers given 5 days notice of a planned interruption | Percentage of customers provided with a not suitable for drinking notice annually |
|--------------------------|---|---|
| <1,200mg/L TDS | >90 | 100 |

Schedule 3 – Customer provisions

1. ADDITIONAL CUSTOMER PROVISIONS

1.1 Requirement for approved financial hardship policy

Where the *licensee* intends to supply *water services to customers* other than *non-residential customers* or members of the *licensee*, the *licensee* must notify the *ERA* and must have an approved *financial hardship policy* in accordance with clause 26 of the *Code of Conduct* prior to any such supply.

For the purposes of clause 1.1, a *water service* does not include *non-potable water supply services*, except where the *non-potable water supply service* is supplied on the basis that the *customer* is responsible for treating the water to make it fit for humans to drink.

[Inserted in licences where clause 5.4 Hardship policy is “Not used”. The wording used in subclause (2) reflects the wording used in the *Water Services Code of Conduct (Customer Service Standards) 2013*]
