

NOTICE OF COMMENCEMENT TIME AND DATE OF THE AMENDING RULES FOR RC_2009_22

In accordance with clause 2.8.12 of the Market Rules, the Independent Market Operator (IMO) has determined that the Amending Rules resulting from the Rule Change Proposal: "The use of tolerance levels by System Management " (Ref: RC_2009_22) will commence at **8.00am** on **Wednesday, 1 December 2010**.

This time and date for the commencement of the Amending Rules differs from that originally published in the Final Rule Change Report (8.00am on 1 November 2010).

The amendment to the timeframe is required to allow:

- System Management sufficient time to develop the necessary amendments to prescribe the process for determining and reviewing the Tolerance Range and Facility Tolerance Ranges in the Power System Operation Procedure; and
- The IMO time to progress the Rule Change Proposal: Correction of minor, typographical and manifest errors (RC_2010_26) which proposes an amendment to clause 7.10.5. Without this amendment the current drafting of clause 7.10.5 would unintentionally require System Management to warn Market Participants about deviations from Resource Plans when inside the Tolerance or Facility Tolerance Range (when the deviation threatens Power System Security or Reliability or would require System Management to issue instructions to Verve Energy or other Registered Facilities). This is against the original intent of RC_2009_22. For further details please refer to the Rule Change Notice available on the following webpage: http://www.imowa.com.au/RC_2010_26

TROY FORWARD
