## Western Power metrology procedure

### Publication of submissions

The Economic Regulation Authority has published [public submissions](#) received in response to a consultation on Western Power's proposed amendments to its metrology procedure.

The metrology procedure sets out the procedures for the provision, installation, maintenance and reading of meters on the Western Power network. It is required under the *Electricity Industry (Metering) Code 2012*.

The Metering Code was amended on 19 August 2021 to allow the implementation of five-minute weekly settlement for the new Wholesale Electricity Market design. This change required Western Power to update the metrology procedure and submit it to the ERA for approval.

The ERA appreciates the input from interested parties and will consider the matters raised in public submissions.
