## Western Power metrology procedure

### Extension of time

The Economic Regulation Authority has extended the deadline to make a decision on proposed amendments to the Western Power metrology procedure.

The ERA has extended the deadline from 31 January 2022 to 30 April 2022 to enable matters raised in submissions on the proposal to be resolved.

The metrology procedure sets out the procedures for the provision, installation, maintenance and reading of meters on the Western Power network. It is required under the *Electricity Industry (Metering) Code 2012*.

The Metering Code was amended on 19 August 2021 to allow the implementation of five-minute weekly settlement for the new Wholesale Electricity Market design. This change required Western Power to update the metrology procedure and submit it to the ERA for approval.

The ERA received two [submissions](#) on the proposal that were published on 15 December 2021.
