Determination of 2022 Weighted Average Cost of Capital for rail networks

Publication of 2022 determination

The Economic Regulation Authority has published its 2022 rail Weighted Average Cost of Capital (WACC) [determination](#).

The *Railways (Access) Code 2000* requires that the ERA determines a long-term WACC to be applied in the establishment of capital costs for regulated railways each year.

This determination updates the annual calculation, as at 30 June 2022, of the WACC to be applied to determine the costs for each of the rail networks covered under schedule 1 of the Code.

This determination follows the method set out in the 2019 rail WACC final determination.
