

Hi,

here are some of my thoughts

- charges for water should be more directly related to usage ie rates lower and water cost higher
- bore water usage should be monitored and should be charged for
- no new bores should be allowed and an active policy closing existing ones should be implemented
- there should be subsidies for reusing grey water domestically or for setting up grey water recycling at home
- domestic waste water should be supplied to interested industry people for a lower cost than potable water

Thank you,

Anna Wood
