Electricity Performance Reporting

Electricity Industry Network Quality and Reliability Performance Report 2005/06

The Economic Regulation Authority has approved publication of the Electricity Industry Network Quality and Reliability Performance Report 2005/06.

The *Electricity Industry (Network Quality and Reliability) Code 2005*, which came into force on 1 January 2006, requires transmitters and distributors to meet, as far as practicable, standards of quality and reliability set out in the Code and to report annually on how they complied with the set standards.

The Performance Report provides an overview of individual reports that have been published for the 12 months ending 30 June 2006 by eight transmitters and distributors licensed by the Authority.

The Performance Report, the first on electricity network quality and reliability published by the Authority, provides the baseline data for future reports which are expected to:

- contain more analysis of the time sequential performance of individual transmitters and distributors;
- comment on performance trends for each distributor and transmitter;
- benchmark the performance of transmitters and distributors if suitable points of reference can be identified; and
- monitor the performance of Western Power against the service standard benchmarks in the Access Arrangement for the South West Interconnected Network.

The Performance Report is available on the Authority's [web site](#).
