1. EXECUTIVE SUMMARY

Emu Downs Wind Farm is a joint venture between Stanwell and Griffin Energy. The project was commissioned in June 2006 and comprises 48 turbines (each with 1.65 MW generating capacity), a substation, interconnection to the main 132 kV grid, an administration/stores building and a network of access roads.

The wind farm is close to the coast, with a good quality wind resource that has increased wind speed and reliability aligning with periods for peak power demand. However, the intermittent nature of wind generation means that it is not available for scheduling or dispatch so, under an agreement with Western Power, EDWF have no obligation to supply power, other than a financial incentive.

The wind farm is now in the operational phase of the 20 year life of the asset with initial commissioning issues resolved and operational procedures fully implemented and proven.

Emu Downs Wind Farm (EDWF) engaged Geographe Environmental Services Pty Ltd (GES) to undertake the second Performance Audit and Asset Management System Review as required by the Economic Regulation Authority (ERA) under generation licence EGL1. This combined report contains the audit findings for both the Performance Audit and Asset Management System Review.

Sections 13 & 14 of the Electricity Industry Act 2004 require as a condition of every licence that the licensee must, not less than once in every period of 24 months (or any longer period that the Authority allows) calculated from the grant of the licence, provide the Authority with a Performance Audit and Asset Management System Review conducted by an independent expert acceptable to the Authority.

The Authority approved the appointment of GES Pty Ltd on the 6th July 2009 and subsequently required the development of an audit plan for ERA approval. Notification of the approval of the audit plan for the 2009 Performance Audit of Licence EGL1 was provided on the 1st September 2009. EDWF has elected to apply the Audit Guidelines – Electricity, Gas and Water Licences (July 2009) to this audit. As required, approval to follow the new Audit Guidelines was obtained from the ERA prior to undertaking the review. The ERA Audit Guidelines: Electricity, Gas and Water Licences (July 2009) will become obligatory for licensees from January 1st 2010.

The period for the audit and review is, 1 July 2007 to 30 June 2009 and the submission of this report before 16 October 2009 is evidence of compliance with the Authority's requirements.

Uncontrolled when Printed or Downloaded

The Asset Management System Review and the Performance Audit have been conducted in order to assess the effectiveness of the Emu Downs Wind Farm Asset Management Systems and level of compliance with the conditions of its Generation Licence EGL1. Through the execution of the Audit Plan, field work, assessment and testing of the control environment, the information system, control procedures and compliance attitude, the audit team members have gained reasonable assurance that the Emu Downs Wind Farm has an effective asset management and has complied with its Generating Licence during the audit period 1 July 2007 to 30 June 2009. Of particular note is improvement in availability statistics (i.e. Mean Time Between Inspections) and work prioritisation efficiency by Vestas through the implementation of effective maintenance programs. This audit report is an accurate representation of the audit teams findings and opinions.

Changes Since Last Audit

The 2007 Performance Audit and Asset Management Review was undertaken over the period of the defects liability where the contractor (Vestas) was responsible for the maintenance of the wind farm under an Engineer Procure Contract (EPC).

This EPC has now expired (6 October 2008) and EDWF have taken over responsibility for maintaining the asset. The core of their asset management plan is the Services Availability Agreement, SAA, which is again with Vestas. They are the manufacturers of the wind turbine generators and contractor for the construction of the farm. The SAA incorporates a guaranteed availability for the wind farm, with penalties if these are not achieved, and incentives for availability over the guaranteed level.

Included in the SAA is maintenance of the high voltage assets consisting of the substation and the static VAR compensators, SVC. For these portions of the works, which Vestas have sub-contracted to two reputable organisations, there is specified maintenance programme and a guaranteed response time to breakdowns in the SAA.

In a letter dated on the 29th May 2009, EDWF JV Manager communicated to the ERA (refer to letter EDWF 290509-01) that this change in contract is not considered a major change to the asset management program as Vestas are essentially providing the same services as the EPC except that the asset management system is documented in more detail. The audit team can confirm this is an accurate representation of the asset management system.

Uncontrolled when Printed or Downloaded

1.1 Performance Audit Summary

All licence requirements reviewed were found to be compliant during the audit.

As required in section 11.4.1 of the Audit Guidelines – Electricity, Gas and Water Licences (July 2009) Table 1 summarises the compliance rating for each licence condition using the 7-point rating scale described in Table 3 (Refer Section 2.3 Methodology).

A comprehensive report of the audit findings is included in Appendix 1.

There were Generation Licence compliance elements that were not included in the scope of this audit because they did not eventuate in this audit period or have not been established within licence EGL1. These are defined in Table 1.

2. PERFORMANCE AUDIT

2.1 Performance Audit Scope

This is the second audit of EDWF's compliance with obligations relating to Generation Licence EGL1. As such, the scope of the audit for the period 1 July 2007 to 30th June 2009 is to:

- assess the license holders internal compliance systems (i.e. process, outcome and output compliance)
- assess the license holders compliance with its license (including integrity of reporting)
- measure performance over time

The previous Performance Audit covered the period 23 June 2005 to 30 June 2007.

This Performance Audit was conducted over the following period 6th July - 24th September 2009 and an overview methodology is outlined below:

- Initial approval to conduct audit obtained by ERA (6th July 2009)
- Preliminary Audit undertaken to assist with preparation of the Audit Plan (5th & 6th August 2009)
- Audit Plan preparation
- Submission of the Audit Plan to the ERA (18th August 2009)
- Audit Plan Approval (1st September 2009) •
- Performance Audit conducted on site to execute Audit Plan (1st to 3rd September 2009)
- Preparation of Audit Report

The following people were interviewed during the Performance Audit;

- EDWF JV Manager • Paul McLagan Michael Karpinski **Project Accountant** Pete Ryan Manager Wholesale Energy Trading ٠ Rob Brady Vestas Maintenance Manager . Clay Douglas Vestas OH&S Representative **Vestas Site Administration**
- Charlene Neethling -
- Western Power Metering Strategist Vic Roque
- Grant Woolard Western Power - Business Analyst

Uncontrolled when Printed or Downloaded

A list of key documents and other information sources examined by the auditor during the Performance Audit is provided below;

- Service and Availability Agreement (SAA)
- Monthly Reports
- ERA Correspondence
- Compliance Reports
- EDWF Asset Management Plan (27/8/07)
- Compliance Reporting Manual June 2006
- Crisis Management Plan EDWF 250.1124
- Vestas Service Management Plan (SMP)
- Land Lease
- Network Access Agreement
- Connection Agreement
- Service Agreements
- Western Australian Electricity Market Metrology Procedure (Western Power September 2006)
- Web Portal
- SCADA system data
- EDWF Year Plan 2009 2010
- Vestas Monthly Reports

Further detail is included in Appendix 1 of the report. In total the Performance Audit required 75 hours of Nicole Davies time.

2.2 **Performance Audit Objective**

The objective of the performance audit, as defined by the Audit Guidelines, is to assess the effectiveness of measures taken by the licensee to meet obligations of the performance and quality standards referred to in the licence.

In addition to compliance requirements, a specific focus is to be taken on the systems and effectiveness of processes used to ensure compliance with the standards, outputs and outcomes required by the licence. The audit outcome is to identify areas of non-compliance and areas of compliance where improvement is required and recommend corrective action as necessary.

2.3 *Performance Audit Methodology*

A risk assessment, assessment of control environment and allocation of audit priority was undertaken in accordance with the Audit Guidelines – Electricity, Gas and Water Licences (July 2009) on each element relating to Generation licensee's of the Electricity Compliance Reporting Manual April 2008 issued by the Authority. The Performance Audit Methodology was detailed in the Audit Plan.

Table 3 defines the compliance ratings shown in section 1.1.

Compliance Status	Rating	Description of Compliance
Compliant	5	Compliant with no further action required to maintain compliance
Compliant	4	Compliant apart from minor or immaterial recommendations to improve the strength of internal controls top maintain compliance
Compliant	3	Compliant with major or material recommendations to improve the strength of internal controls top maintain compliance
Non-Compliant	2	Does not meet minimum requirements
Significantly Non-Compliant	1	Significant weaknesses and/or serious action required
Not Applicable	N/A	Determined that the compliance obligation does not apply to the licensee's business operations
Not Rated	N/R	No relevant activity took place during the audit period, therefore it is not possible to assess compliance

Table 3: Operational/Performance Compliance Rating Scale

In order to focus the audit effort and identify areas for testing and analysis a preliminary assessment of the risk and materiality of non-compliance with the Generation Licence was undertaken in accordance with the requirements of AS/NZS4360 Risk Management and Appendix 2 of the Audit Guidelines. This assessment rating was reviewed during the audit process subject to the verification of control environment.

Deviation from the Audit Plan

Changes made to the pre-assessment ratings during the audit process are highlighted in Appendix 1 and an explanation for the amendment provided.

Follow-Up from Previous Audit Findings

A detailed assessment of the previous audit post implementation action plan was undertaken during the audit to assess effectiveness. A summary is provided in Table 4.

Table 4 : 2007 Performance Audit Key Findings, Recommendation, Post Audit Plan & Progress

Ref	Licence Condition	Issue	Recommendation	Post-Audit Action Plan	Progress	Effectiveness
81	A licensee must, not less than once every 24 months, provide the Authority with a performance audit conducted by an independent expert acceptable to the Authority. A licensee must provide the Authority with a report by an independent expert as to the effectiveness of its asset management system every 24 months, or such longer period as determined by the Authority.	Whilst compliance with this requirement is well evidenced, the allocation of responsibility and process for ensuring changes to licence conditions/legislation are identified was not defined.	Establish, implement and maintain a procedure to ensure the content of the Compliance Manual is executed, allocated for responsibility and kept up to date.	ACTION: Review the potential for the establishment of a compliance scheduling system for the organisation in order to manage critical compliance functions and assign responsibilities. RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	A procedure has been implemented to review the contents of the Compliance Manual. The EDWF Year Plan gives further details.	This procedure was verified as implemented and the item was noted in the EDWF Year Plan for the 2009-2010 year. However, it was incorrectly scheduled for August 2009. The error was identified and subsequently the audit has been conducted in compliance with licence requirements. The item has rolled forward to the audit plan in order to ensure correct implementation has occurred.

Ref	Licence Condition	Issue	Recommendation	Post-Audit Action Plan	Progress	Effectiveness
83	A licensee must notify details of the asset management system and any substantial changes to it to the Authority.	Appropriate notification has occurred during the audit period. However, it is noted that the Draft Asset Management System will be required to be reported to the ERA as required by the licence condition 16.2.	Post Engineer Procure Contract (EPC) changes to Asset Management System and the changes effected by the proposed Draft Asset Management System will be required to be reported to the ERA within 10 business days of such a change.	ACTION: Include in review of Compliance Manual subject to change in JV Partnership arrangements. RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	The EPC contract has been superseded by a Service and Availability Agreement (SAA) as of 6 October 2008. The SAA details an asset management plan for the wind farm.	The Audit Team confirms that there has been no substantial change to the asset management system as a result of the change from EPC to SAA. As such appropriate notification has occurred during the audit period.
107 & 108	A licensee must comply, and require its auditor to comply, with the Authority's standard audit guidelines dealing with the performance audit. A licensee must comply, and must require the licensee's expert to comply, with the relevant aspects of the Authority's standard guidelines dealing with the asset management system	The requirement for the auditor to comply with Authority's standard audit guidelines was included in the brief issued by the licensee and subsequently documented in the audit plan and issue of communications from the Authority was provided by the licensee however the Compliance Manual [EDWF 250.1236] did not reflect the most up to date copy of the audit guidelines.	Update the Compliance Manual to reflect the latest copy of the Audit Guidelines i.e. September 2006. Current reference made to draft guidelines only. Consideration could be given to establishing a Service Agreement for the conducting of audit and specify ERA audit requirements.	ACTION: Compliance Manual to be reviewed and Services Agreement established for future audits to formalise this requirement. RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	The Compliance Manual currently in use is Revision 0. Service agreements will be used to appoint auditors for ERA audits as and when required.	Service Agreements have been utilised to ensure requirements of audit are met.

Uncontrolled when Printed or Downloaded

Ref	Licence Condition	Issue	Recommendation	Post-Audit Action Plan	Progress	Effectiveness
109	A licensee must report to the Authority, in the manner prescribed, if a licensee is under external administration or there is a significant change in the circumstances upon which the licence was granted which may affect a licensee's ability to meet its obligations.	The current JV Partnership has not changed during the audit period however in the near future the arrangements are expected to change and planning to ensure compliance with Generation Licence should be flagged during the transition phase.	Requirement to communicate to the ERA changes in JV partnership should the need arise.	ACTION: Ensure compliance with General Licence requirements during the JV Partnership transition process as detailed in Compliance Manual paragraph 20. RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	The JV Partnership has not changed since the inception of the wind farm. EDWF shall communicate with the ERA and other relevant organisations should the JV Partnership change in the future.	There is still no change to JV Partnership arrangement.
111	A licensee must publish any information it is directed by the Authority to publish, within the timeframes specified.	The licensee does not specifically have a website established for the Wind Farm both JV Partners have website which would facilitate publishing.	Consideration could be given to establishing a website for the wind farm to allow for the publishing of information.	ACTION: As SCL are selling their interests in the wind farm and subject to the outcome of this JV Partnership arrangement a website will be established for Emu Downs Wind Farm. RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	The JV Partnership has not changed since the inception of the wind farm. EDWF shall publish information as required by the Authority as and when required.	JV websites have continued to be utilised in manner observed during last audit.

Ref	Licence Condition	Issue	Recommendation	Post-Audit Action Plan	Progress	Effectiveness
367 (319)	A Code participant who becomes aware of an outage or malfunction of a metering installation must advise the network operator as soon as practicable.	There is no system established to notify a metering installation malfunction other than a significant deviation in metering data.	Consideration could be given to install voltage relay to facilitate the trigger of an alarm to notify metering installation malfunction.	ACTION: Liaise with WPN on the proposed strategies to ensure metering systems malfunctions are identified and managed appropriately RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	Western Power has a main and backup meter for each of the two 132kV metering points. These meters are self powered, independent and meet the requirements of the Technical Rules which has been approved by the ERA. The metering installations are considered to be best practice for the industry. EDWF is in constant contact with Western Power and shall report any metering malfunction or problems as and when they occur.	Upon request EDWF is able to utilise the meter data maintained by Western Power. In addition, the SCADA data provides them with access to data should the need arise. Any discrepancies can be reconciled accordingly. Outcome is satisfactory and compliance with condition enabled due to systems established. This is further detailed within Appendix 2 item 319.
397 (349)	A network operator and affected Code participants must liaise together to determine the most appropriate way to resolve a discrepancy between energy data held in a metering installation and data held in the metering database.	Although EDWF monitor the accuracy of the metering data, WPN do not have any system to become aware of discrepancy other than reactive to disputed invoice.	Access to the SCADA system for the Metering Services division of WPN similar to that of Technical Services would facilitate a more efficient process to be established.	ACTION: Nil this is the responsibility of WPN RESPONSIBILITY: NA DATE:NA	NA	NA

Ref	Licence Condition	issue	Recommendation	Post-Audit Action Plan	Progress	Effectiveness
438 (390)	A Code participant must not request a test or audit unless the Code participant is a user and the test or audit relates to a time or times at which the user was the current user or the Code participant is the IMO.	WPN Technical Services branch have access to the SCADA and are establishing an audit schedule to verify metering databases.	Liaise with WPN Technical Services to determine whether an audit of the system is scheduled.	ACTION: Liaise with WPN Technical Services to determine whether an audit of the system is scheduled. RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	Western Power has not undertaken an audit of the metering system to date.	It is understood that an audit will be scheduled by Western Power when the Meter Asset Management Plan is developed by Western Power and approved by the ERA.
464 (416)	A user must, in relation to a network on which it has an access contract, comply with the rules, procedures, agreements and criteria prescribed.	A Network Access Agreement has been established and compliance is monitored. However, the Compliance Manual covers some aspects of the NAA.	Monitoring of requirements of the NAA in the compliance manual is not comprehensive. Consideration could be given to including all specific clauses as detailed in the ERA Compliance Reporting Manual for completeness	ACTION: Include in review of Compliance Manual subject to change in JV Partnership arrangements. RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	The Compliance Manual shall next be reviewed in the second half of 2009. The NAA shall also be reviewed and any compliance monitoring requirements shall be included into the Compliance Manual.	As the scheduled review is outside the scope of this audit period it has been carried through to the next audit

1

Uncontrolled when Printed or Downloaded

Ref	Licence Condition	Issue	Recommendation	Post-Audit Action Plan	Progress	Effectiveness
466 (418)	Code participants must use reasonable endeavours to ensure that they can send and receive a notice by post, facsimile and electronic communication and must notify the network operator of a telephone number for voice communication in connection with the Code.	WPN Metering Services indicated they have the means to communicate with EDWF however there is no telephone number recorded on their system	Provide telephone details to WPN for their records.	ACTION: Contact Metering Services Commercial Co- Ordinator to provide telephone contact details RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 October 2007	Western Power has been provided with relevant contact details.	Although EDWF provided details to Western Power the details have not been entered into the Meter Data Registry. This item has been carried forward to the next audit.
469 (421)	A Code participant must notify any affected network operator of any change to the contact details it notified to the network operator at least 3 business days before the change takes effect.	As the JV Partnership arrangements are anticipated to change notification to WPN is required to ensure compliance with the Metering Code 7.2 (5).	In the event of a change to JV partnership arrangements updated contact details will be required to be lodged with WPN in accordance with the metering code.	ACTION: Include in review of Compliance Manual subject to change in JV Partnership arrangements. RESPONSIBILITY: General Manager (EDWF MANAGER P/L) DATE: 30 Sept 2008	The JV Partnership has not changed since the inception of the wind farm. EDWF shall communicate with Western Power should the JV Partnership change in the future.	There is still no change to JV Partnership arrangement.

Note: Ref refers to the number of action item in the 2007 Audit Report and ref in brackets refers to 2008 Compliance Manual.

2.4 2009 Post Audit Implementation Plan

As stipulated in section 11.9 of the Audit Guidelines (July 2009), the Audit Team notes that the Performance Audit Post Implementation Plan (Appendix 3) does not form part of the Audit Opinion. It is the responsibility of the licensee to ensure actions are undertaken as determined by EDWF.

3. ASSET MANAGEMENT SYSTEM EFFECTIVENESS REVIEW

3.1 AMS Review Scope

The scope of the AMS review includes an assessment of adequacy and effectiveness of Emu Downs Wind Farm asset management system, by evaluating during the audit period 1 July 2007 to 30 June 2009 the following;

- 1. Asset Planning
- 2. Asset creation/acquisition
- 3. Asset disposal
- 4. Environmental analysis
- 5. Asset operations
- 6. Asset maintenance
- 7. Asset management information system
- 8. Risk management
- 9. Contingency planning
- 10. Financial planning
- 11. Capital expenditure planning
- 12. Review of asset management system

The previous Asset Management Review covered the period 23rd June 2005 to 30th June 2007.

The review has been established as a requirement of the current Generating Licence issued by the Economic Regulation Authority to Emu Downs Wind Farm (EDWF).

The asset management review follows the approved audit plan and uses;

- a risk based approach to auditing using the risk evaluation model set out in AS/NZS 4360:2004;
- an overall effectiveness rating for an asset management process, based on a combination of the process and policy adequacy rating and the performance rating
- the format and content of the reviewer's report; and post- implementation plan as described in the Guidelines.

The following people were interviewed during the review;

Paul McLagan -		EDWF JV Manager
Michael Karpinski	-	Project Accountant
Rob Brady	-	Vestas Maintenance Manager
Bevin Blunt	-	Vestas Site Supervisor
Clay Douglas -		Vestas OH&S Representative
Charlene Neethling	-	Vestas Site Administration
Matthew Kok -		Western Power - Systems Operations

The key documents and other information sources are detailed below and further in Appendix 2.

- EDWF Annual Operations Report 2008-9
- EDWF Monthly Reports
- Vestas Monthly Reports
- Network Access Agreement, WP EDWF
- Service Availability Agreement
- Griffin Energy EDWF RECs Process
- Draft EDWF Plant Management Strategy Substations and HV Equipment
- EDWF Whole of Life Cost Model
- EDWF Asset Management Plan Rev 27-8-07
- Fixed Asset Register, October 2006
- EDWF Maintenance Strategy Development Scope of Works
- Vestas Online Business Customisation Operator Manual
- EDWF Park Control Functional Specification
- EDWF Defects and Issues Register
- Garrad Hasson EDWF End of Warranty Inspections
- PB Resource and Energy Report
- PB Wind Data Report
- Appendix to Powerplan's Service Agreement
- Griffin EDWF Service Agreement
- EDWF Service Maintenance Plan
- Vestas Maintenance Service Schedule
- Capital Expenditure Budget, 2009-10
- Operational Expenditure Budget, 2009-10
- EDWF Year Plan 2009-10
- Vestas HV Training

Sentember 2009

- HV Electrical Operator Audit
- PB EDWF Predicted and Actual Wind Farm Energy Output Analysis
- PB EDWF Expansion of Installed Capacity
- ERA Post Audit Report
- Management Committee Actions arising from meetings
- Asset register
- Operational Expenditure Budget, 2009-10
- Capital Expenditure Budget, 2009-10
- Noise monitoring Avery residence
- Western Power Contract Agreement
- Western Power Access Agreement
- EDWF Update of 2007 post audit implementation plan

The review was conducted in conjunction with the Performance Audit during August – September 2009 and included a 2 day preliminary site audit, desktop review, 3 day audit to execute audit plan and interview sessions and report writing. In total the audit required 65 hours of Simon Ashby's time.

3.2 Objective of the Asset Management System Review

The objective of the review is to examine the effectiveness of the processes used by Emu Downs Wind Farm to deliver asset management, the information systems supporting asset management activities and the data and knowledge used to make decisions about asset management. These elements were examined from a life cycle perspective i.e. planning, construction, operation, maintenance, renewal, replacement and disposal using the guidelines developed by the Economic Regulation Authority.

3.3 Methodology for Asset Management System Review

The audit methodology detailed in the Audit Guidelines – Electricity, Gas and Water Licences (July 2009) was used in the execution of the Asset Management System Review and is detailed in the Audit Plan

Asset Management System Effectiveness Rating

The Audit Guidelines (section 11.4.2) states that the asset management review report must provide a table that summarises the auditor's assessment of both the process and policy definition rating and

Uncontrolled when Printed or Downloaded

Sentember 2009

Page 20 of 37

the performance rating for each key process in the licensee's asset management system using the scales described in Table 5 and Table 6. It is left to the judgement of the auditor to determine the most appropriate rating for each asset management process.

Table 5: Asset management process and policy definition adequacy ratings

Rating	Description	Criteria
A	Adequately defined	 Processes and policies are documented. Processes and policies adequately document the required performance of the assets.
		Processes and policies are subject to regular reviews, and updated where necessary
		• The asset management information system(s) are adequate in relation to the assets that are being managed.
В	Requires some	Process and policy documentation requires improvement.
	improvement	• Processes and policies do not adequately document the required performance of the assets.
		• Reviews of processes and policies are not conducted regularly enough.
		 The asset management information system(s) require minor improvements (taking into consideration the assets that are being managed).
С	Requires significant	Process and policy documentation is incomplete or requires significant improvement.
	improvement	Processes and policies do not document the required performance of the assets.
		Processes and policies are significantly out of date.
		 The asset management information system(s) require significant improvements (taking into consideration the assets that are being managed).
D	Inadequate	Processes and policies are not documented.
-		• The asset management information system(s) is not fit for purpose (taking into consideration the assets that are being managed).

Uncontrolled when Printed or Downloaded

Table 6: Asset management performance ratings

Rating	Description	Criteria
1	Performing effectively	 The performance of the process meets or exceeds the required levels of performance. Process effectiveness is regularly assessed and corrective action taken where necessary.
2	Opportunity for improvement	 The performance of the process requires some improvement to meet the required level. Process effectiveness reviews are not performed regularly enough. Process improvement opportunities are not actioned.
3	Corrective action required	 The performance of the process requires significant improvement to meet the required level. Process effectiveness reviews are performed irregularly, or not at all. Process improvement opportunities are not actioned.
4	Sericus action required	 Process is not performed, or the performance is so poor that the process is considered to be ineffective.

Deviation from the Audit Plan

There were several changes made the risk assessment ratings conducted for the Audit Plan for the Asset Management System Review. The revisions only involve the adequacy of existing controls. These changes are highlighted within Appendix 2 of the report.

In addition, the Reference numbering differs to that in the Audit Plan as the Outcome has been put as an overarching reference to reflect the structure of Table 16 in the Guidelines

Performance Audit and Asset Management System Review Report Emu Downs Wind Farm Sep 2009 Rev 2

2007 Asset Management Review Key Findings, Recommendation, Post Audit Plan & Progress

Most of the 2007 audit recommendations concerned the maintenance of the high voltage, HV, equipment as no arrangements for the post defects liability period had been established at the time. The SAA now incorporates maintenance and repairs in it and these tasks have been sub-contracted to reputable organisations by Vestas.

Ref	Audit Requirement	issue	Recommendation	Post-Audit Action Plan	Progress To Date (EDWF Response)	Effectiveness
1.3	Asset Planning - Service levels are defined Effectiveness Rating - 4	At the time of the audit a maintenance contract for the substation was not in place	A Maintenance Contract is required for the substation	ACTION: A contractor has been appointed to ensure compliance with this requirement. RESPONSIBILITY: General Manager (EDWF Manager P/L) DATE: 30th September 2008	The EPC contract has been superseded by a Service and Availability Agreement (SAA) as of 6 October 2008. The Contractor is responsible for substation maintenance as per the SAA.	SAA covers substation and SVC maintenance and repairs.
2.6	Asset Creation/Acquisition - Ongoing legal/environmental/safety obligations of the asset owner are assigned and understood Effectiveness Rating – 3	The risk summary identifies the risk, description of risk causes, impact and control measures, risks identified include ongoing legal/environmental/safety obligations and current status of actions. The service agreements and	The risk summary could be developed further to register ongoing compliance and to flag issues as they fall due	ACTION: Develop Risk Summary as per recommendation RESPONSIBILITY: General Manager (EDWF Manager P/L) DATE: 30th September 2008	A risk review was performed and the results included into the documentations associated with the 2009-2010 Year Plan.	A risk register has been implemented which inctudes compliance.

Ref	Audit Regulrement	Issue	Recommendation	Post-Audit Action Plan	Progress To Date (EDWF Response)	Effectiveness
		GM KPI's assign responsibilities and expected outcomes				
3.1	Asset Disposal - Effective management of the disposal process will minimise holdings of surplus and <i>under-performing</i> assets and will lower service costs. Effectiveness Rating – 2	At this early stage of the project the Whole of Life Plan identifies the predicted life of the assets out to 2027, as the plan matures under- performing assets will be identified. Long term - the EDWF dismantling, removal & rehabilitation costs document based on a rough order of magnitude cost estimation provides estimated costs for dismantling, removal and rehabilitation, it includes in detail the plans for remediation.	Maintenance of the whole of life model will improve the identification of underperforming assets	ACTION: Implementation and ongoing review of the Whole of Life Plan RESPONSIBILITY: General Manager (EDWF Manager P/L) DATE: 30th September 2008	Whole of life plans are reviewed as appropriate.	The whole of life model does not appear to be maintained with actual performance being "sample data only".

Performance Audit and Asset Management System Review Report Emu Downs Wind Farm Sep 2009 Rev 2

Ref	Audit Requirement	lasue	Recommendation	Post-Audit Action Plan	Progress To Date (EDWF Response)	Effectiveness
6.1	Asset Maintenance - Maintenance plans cover the scheduling and resourcing of the maintenance tasks so that work can be done on time and on cost. Effectiveness Rating - 3	Maintenance plans for scheduling and resourcing are undertaken for Wind Turbine Generators (WTGs). Only fault maintenance is presently being performed on the HV system.	Maintenance plans for scheduling and resourcing for HV system required.	ACTION: The requirement for the HV system has been identified and a contractor has been appointed (RJE) to rectify issue. RESPONSIBILITY: General Manager (EDWF Manager P/L) DATE: 30th September 2008	The Contractor is responsible for the maintenance of the HV system as per the SAA. The Contractor has adequate plans and resources for the maintenance of the HV system.	SAA covers substation and SVC maintenance and repairs.
6.2	Asset Maintenance - Maintenance policies and procedures are documented and linked to service levels required Effectiveness Rating – 3	Maintenance policies and procedures are established and implemented for Wind Turbine Generators. Only fault maintenance is presently being performed on the HV system.	Maintenance policies and procedures for HV system required.	As above	The Contractor is responsible for the maintenance of the HV system as per the SAA. The Contractor has adequate maintenance policies and procedures for HV system.	SAA covers substation and SVC maintenance and repairs.
6.3	Asset Maintenance - Regular inspections are undertaken of asset performance and condition Effectiveness Rating – 3	Inspections of Wind Turbine Generators are undertaken. Records of inspections were available for review on site. Inspections of HV system is presently being performed on an informal basis.	Maintenance inspection and test schedules for HV system required.	As above	The Contractor is responsible for the maintenance of the HV system as per the SAA. The Contractor has adequate maintenance inspection and test schedules for HV system.	SAA covers substation and SVC maintenance and repairs.

Uncontrolled when Printed or Downloaded

Ref	Audit Requirement	issue	Recommendation	Post-Audit Action Plan	Progress To Date (EDWF Response)	Effectiveness
6.4	Asset Maintenance - Maintenance plans (emergency, corrective and preventative) are documented and completed on schedule Effectiveness Rating – 3	Emergency, corrective and preventative maintenance plans for Wind Turbine Generators are established. Only fault maintenance is presently being performed on the HV system. Discussions with the Acting Site Supervisor indicated that contingency plans have been established however these documents were not available for review during the audit.	Emergency, corrective and preventative maintenance plans for HV system required.	As above	The Contractor is responsible for the maintenance of the HV system as per the SAA. The Contractor has adequate emergency, corrective and preventive maintenance plans for HV system.	SAA covers substation and SVC maintenance and repairs.
8.2	Risk Management – Risk management policies and procedures exist and are being applied to minimise internal and external risks associated with the asset management system Effectiveness Rating – 3	Contract provisions currently prescribe the risk management process during the warranty period The AMP considers both internal & external risks associated with the project in the planning process	Develop an integrated risk policy which takes account of all phases of the project lifecycle including the post warranty period.	ACTION: As per recommendation RESPONSIBILITY: General Manager (EDWF Manager P/L) DATE: 30th September 2008	A risk review was performed and the results included into the documentations associated with the 2009-2010 Year Plan.	SAA covers substation and SVC maintenance and repairs.
8.3	Risk Management - Risks are documented in a risk register and treatment plans are actioned and monitored Effectiveness Rating - 3	The risk summary identifies the risk, description of risk causes, impact and control measures, risks identified include ongoing legal/environmental/safety obligations and current status of actions.	Further development of the risk summary to include an action plan tracking system	ACTION: Review risk management strategies as per 8.2. RESPONSIBILITY: General Manager (EDWF Manager P/L) DATE: 30th September 2008	A risk review was performed and the results included into the documentations associated with the 2009-2010 Year Plan.	A risk register has been implemented.

3.4 2009 Post Audit Implementation Plan

As stipulated in section 11.9 of the Audit Guidelines (July 2009), the Audit Team notes that the Asset Management Review Post Implementation Plan (Appendix 4) does not form part of the Audit Opinion. It is the responsibility of the licensee to ensure actions are undertaken as determined by EDWF.

Uncontrolled when Printed or Downloaded

Sentember 2009

4. RECOMMENDATIONS FOR AMENDMENT TO AUDIT PROCESS

Audit Guidelines

The following errors were noted in the Audit Guidelines (July 2009). These were communicated to the ERA by GES Pty Ltd in order to clarify the audit process;

- 1. Section 6.3 Risk based approach to audits & reviews. Reference to Appendix 1 is incorrect and should be Appendix 2 on;
 - Last paragraph Page 5
 - Second paragraph Page 6
- 2. Section 8.2. Auditor Independence; typographic error entity3 should be entity³ (Page 8)
- 3. Appendix 4, Section 2 Asset Management Key System Processes numbering (3) to (14) should be (1) to (12)

These errors have not impacted the audit process and are understood to be addressed by the ERA on the next revision of the document.

5. FOLLOW UP AUDIT PROCESS

This is the second Performance Audit and Asset Management Review conducted since the issue of the licence and as such previous audit report findings have been addressed in the content of the report. Review of actions taken in response to recommendations will form part of subsequent audit plans.

The license proposes that EDWF reports progress on the Post Audit Implementation Plan (refer Appendix 3 & 4) to the ERA in the annual Compliance Reports.

1	Asset Planning Asset planning strategies are focused on meeting customer needs in the most effective and efficient manner (delivering the right service at the right price).			Intervieweee Paul McLagan - Manager Michael Karpinski - Project Accountant Rob Brady - Vestas Maintenance Manager Bevin Blumt - Vestas Site Supervisor Matthew Kok - Western Power EPCC					controls			
	Outcome Integration of asset strategies into operational or business plans will establish a framework for existing and new assets to be effectively utilised and their service potential optimised.	3 		References 1. SAA, Service Availability Agreement, Vestas EDWF 2. Draft EDWF Plant Management Strategy Substations and Hy Equipment 3. EDWF Whole of Life Cost Model 4. EDWF Asset Management Plan Rev 27-8-07 5. EDWF Maintenance Strategy Development Scope of Works		с	3	н	S	2		
				6. PB Resource and Energy Report 7. PB Wind Data Report 8. Appendix to Powerptan's Service Agreement 9. Capital Expenditure Budget, 2009-10 10. EDWF Year Ptan 2009-10 11. HV Electrical Operator - Audit 12. Western Power Contract Agreement 13. Western Power Access Agreement 14. Management Committee 15. Western Power EPCC, Meithew Kot								
1.1		Planning process and objectives reflect the needs of all stakeholders and is integrated with business planning	Some stakeholder needs not addressed	16. Operational Expenditure Budget, 2009-10 The wind farm is fully established, defects liability period ended 6 Oct 2006. Expansion of generation capacity has been investigated but found uneconomic and no further expansion is planned. Refs 3,	Wind farm now operating for some time and stakeholder issues have been mainly addressed Western Power have been invited to comment but no response to date. Ref 15	B	1	L	S	5		
1.2		Service levels are defined	Some service levels not defined	4.6.7.9.10 The agreement with Western Power is to supply whatever power is available from the wind farm, subject to various system operational restraints defined in the agreement. Refs 12, 13 The SAA clearly defines roles and responsibilities and performance targets. Ref 1	Assets now part of a proven operating system and service contracts established for wind turbines and substation. Refs 1, 4 Substation service requirements being reviewed and the SAA may be revised. Ref 2	A	3	н	S	2	Audit showed HV substation now has an AMS	
1.3		Non-asset options (e.g. demand management) are considered	Agreements in place with WP for. consumption of resource, demand management not applicable for wind farm	N/A. This project aims maximise generation and sales. Refs 12, 13		C	. 1	<u>.</u> . L	S	N/A		
1.4		Lifecycle costs of owning and operating assets are assessed	Lifecycle costs larger than expected	Life cycle costing has been applied to the original project and the expansion review Refs 3, 10	Upfront capital cost is dominant in LCC and these are established now The life cycle costs have not been updated to reflect actual performance or changes in tariffs.	С	2	M	S	4		
1.5		Funding options are evaluated	Alternate funding cost less	Budget reviewed annually Refs 9, 10, 16	Budget revised every year. Refs 3, 10	В	2	M	S	4	· · · · ·	<u> </u>
1.6		Costs are justified and cost drivers identified	Costs are larger than expected	Interest and O & M are the main cost drivers	CapX mainly spent already and experience of real OpX has been gained. Budget revised regularly looking at costs, Refs 9, 10, 16	С	2	M	S	4		
1.7		Likešhood and consequences of asset failure are predicted	Asset fail more often with severer consequences than expected	SCADA system monitors performance and alarms. These are reported to EDWF. Ref 1. Vestas monitor all their wind turbines around the world and analyse reliability and faults. Life cycle costing considers equipment replacement Ref 3	Vestas regularly upgrade equipment identified as a threat to performance and availability. Spares are held on site, in Geraldton, Victoria, Singapore and Denmark. Risk is spread over 48 generators	8	2	M	S	4		
1.8		Plans are regularly reviewed and updated	Plans do not reflect best practices	Regular reporting and review	EDWF Year Plan 2009-2010 Ref 10 Assets now part of a proven operating system. Operation and Maintenance contract for WTGs is with the manufacturer and upgrades are incorporated in the contract. Service contracts established for wind turbines and substition.	C	2	M	S	4		
	Asset creation/acquisition Asset creation/acquisition means the provision or improvement of an asset where the outlay can be expected to provide benefits beyond the year of outlay.			Interviewees Paul McLagan - Manager Michael Karpinski - Project Accountant References 1. EDWF Whole of Life Cost Model 2. PB Resource and Energy Report	<u>Ref 1</u>	в	2	M	S	4		
	Outcome A more economic, efficient and cost- effective asset acquisition framework which will reduce demand for new assets." lower service costs and improve service	ಕ್ರಾಂಗ್ ಸಂಭಾನವರ್ಷ ಮನ್ನು ಸಂಘಟನೆಗಳು ಕ್ರಾ	- ve - 20	3. PB Wind Data Report 4. Capital Expenditure Budget, 2009-10 5. PB EDWF Expension of Installed Capacity 6. EDWF Update of 2007 post audit Implementation plan 7. Garrad Hasson EDWF End of Warranty Inspections	ಗ್ರಾಮದ್ಯ ಕ್ರಮ ಮತ್ತು ಮತ್ತು ಎತ್. ಇವರಿ ಎಂದಿ ಕ್ರಮ ಕ್ರಮ ಕ್ರಮ ಕ್ರಮ ಕ್ರಮ ಕ್ರಮ ಕ್ರಮ ಕ್ರಮ	s. as	···· 6	9.12.5 F F	-			
2.1		Full project evaluations are undertaken for new assets, including comparative assessment of non-asset solutions	· ·	No creations or acquisitions are planned. Installed capacity is at Licence level. Option of additional wind turbines was investigated but won't proceed.	Wind farm is at full development. No major creations/acquisitions are planned. Refs 1, 4,	8	1	L	s	5		
2.2		Evaluations include all life-cycle costs		Whole of life modelling	Included in original project and expansion project studies. Ref 1	C	1		s	5		
2.3		Projects reflect sound engineering and business decisions	Projects cost more, do not meet their objectives or are unsafe to operate	Use best practice, quality design and plant Refs 2, 3, 5	Availability target now being exceeded. Reputable suppliers used to supply and maintain. Independent design review Refs 2, 3, 5, 7	8	2	м	S	4		
2.4		Commissioning tests are documented and			Project commissioning was complete in previous audit period.	В	2	M	s	4		
2.5		completed Ongoing legal/environmental/safety obligations of the asset owner are assigned and understood	does not operate correctly or safely Assets and practices do not meet current legislative requirements	Compliance register	Not edequately monitoring compliance renewals dates. Independent reviews of performance and equipment.	с	3	н	м		Compliance reporting not programmed

EDWF PERFORMANCE AUDIT POST AUDIT IMPLEMENTAITON PLAN SEPTEMBER 2009

September 2009

Page 31 of 37

2009 Performance Audit Key Findings, Recommendation & Post Audit Plan

Ref	Licence Condition	Issue	Recommendation	Post-Audit Action Plan
349	Licence Condition – 5.1 A network operator and affected Code participants must liaise together to determine the most appropriate way to resolve a discrepancy between energy data held in a metering installation and data held in the metering database. COMPLIANCE RATING – 4	The Electricity Industry Metering Code 2005 notes in Table 3 that EDWF meters are Class 2/Type 0.5 Meters. The Metrology Procedure (4 Sept 2006) defines the frequency for calibration and testing for these meters in Schedule 1 (ref 5.86) and notes the frequency as 4 yearly calibration. It is understood that Western Power has yet to develop a Meter Asset Management Plan for the maintenance of the HV meters (the Meter Management Plan currently available refers to Residential meters only). It would appear that with the current approved Metrology Procedure the meters are due for calibration. However, Western Power have indicated that to implement the testing, a Metering Asset Management Plan will have to be put in place to cover the period of testing (start date). This document will require ERA approval. It is important to note that there have been no data inaccuracies identified during the audit period (Ref 351) that would indicate an issue with data adequacy.	Consideration could be given to requesting calibration of the meters if the Plan is not developed and implemented before the Feb 2010 timeframe. Liaison with Western Power/ERA is recommended.	ACTION: Clarify calibration requirements for the EDWF meters and monitor testing schedule as per outcome. RESPONSIBILITY: Manager Wholesale Energy Trading DATE: 31 May 2010

Uncontrolled when Printed or Downloaded

Ref	Licence Condition	Issue		Recommendation	Post-Audit Action Plan
416	Licence Condition 5.1 A user must, in relation to a network on which it has an access contract, comply with the rules, procedures, agreements and criteria prescribed COMPLIANCE RATING – 4	NAA. Not requirement not comp including Complian It is noted Plan to re	pliance Manual covers some aspects of the ted in the previous audit that monitoring of ents of the NAA in the Compliance Manual is prehensive. Consideration could be given to all specific clauses as detailed in the ERA ace Reporting Manual for completeness. It that this is scheduled within the EDWF Year eview the Compliance Manual in August 2009 side audit scope).	Ensure that the Compliance Manual is reviewed as scheduled in the EDWF Year Plan 2009- 2010 (i.e. August 2009) and that the NAA is reviewed to ensure requirements are updated where necessary. Note: this has not been included in audit as outside the scope of the audit timeframe.	ACTION: Undertake the review of the Compliance Manual RESPONSIBILITY: EDWF JV Manager DATE: 31 Dec 2009
418	Licence Condition 5.1 Code participants must use reasonable endeavours to ensure that they can send and receive a notice by post, facsimile and electronic communication and must notify the network operator of a telephone number for voice communication in connection with the Code. COMPLIANCE RATING – 4	establish Discussio have the evidence details a Correctiv MBS sys EDWF h	ons with the Metering Services indicated they means to communicate with EDWF and o of emails indicated access t and all required re now recorded within their system. Ye action identified in previous audit that the stem be updated with correct details. Although ave confirmed they conveyed the details it that these are yet to be entered into Meter	Contact Metering Services and issue current contact details. Request written confirmation or MBS print out when complete. Wester Power Metering Services indicated that contact person for MBS is <u>rhonda.timms@westernpower.com.au</u>	ACTION: Contact Metering Services and issue current contact details. Request written confirmation or MBS print out when complete. RESPONSIBILITY: Manager Wholesale Energy Trading DATE: 31 Dec 2009.

Ref	Licence Condition	Issue		Recommendation	Post-Audit Action Plan
420	A Code participant must notify its contact details to a network operator with whom it has entered into an access contract within 3 business days after the network operator's request.	As for 418		As for 418	As for 418
81	5 A licensee must, not less than once every 24 months, provide the Authority with a performance audit conducted by an independent expert acceptable to the Authority. COMPLIANCE RATING – 4	2009-201 year inter planning t however	e audit was flagged in the EDWF Year Plan 0 it was incorrectly scheduled for 2010 at a 3 val. The issue was identified internally and undertaken as per the licence requirements the scheduling process requires further in and accountability.	Include specific performance requirement into the Service Agreement for the JV Manager and ensure scheduling corrected in the 2010-2011 Year Plan.	ACTION: Include a specific reference in the Compliance Manual that an audit is required every 24 months. RESPONSIBILITY: EDWF JV Manager DATE: 31 Dec 2009
