Water Supply, Sewerage and Irrigation Performance Data 2014 to 2019

The Economic Regulation Authority has published the [consolidated performance data](#) for water supply, sewerage and irrigation services covering 2014 to 2019.

This is the first year that the ERA has published a consolidated set of data for water services. In previous years, the data for water and sewerage supply schemes with between 1,000 and 9,999 connections, less than 1,000 connections, and irrigation services were published separately.

Background information

Water licences include a condition requiring licensees to provide performance data to the ERA for each year ending 30 June. The [Water, Sewerage and Irrigation Licence Performance Reporting Handbook](#) specifies the data to be provided for each water service.

The data to be provided by each licensee depends on the type of water service and, for water supply and sewerage services, the number of connected properties on the supply network. The ERA only publishes data for water and sewerage supply schemes with less than 10,000 connected properties.

There is a separate national performance reporting framework for water and sewerage supply schemes with more than 10,000 connected properties that is managed by the Bureau of Meteorology. Information about the reporting framework and previous performance reports are available on the Bureau of Meteorology [website](#).
