Zenith Energy (EGP JV) Pty Ltd

Decision to grant electricity generation licence and electricity transmission licence

The Economic Regulation Authority has granted electricity generation licence EGL39 and electricity transmission licence ETL10 to Zenith Energy (EGP JV) Pty Ltd.

Zenith Energy and Northern Star Resources are undertaking the Eastern Goldfields Power joint venture to construct and operate electricity generating works and an electricity transmission system. The project will be located adjacent to the Kalgoorlie Consolidated Gold Mines Fimiston Open Pit and supply electricity to KCGM mining operations.

The generating works will consist of 10 dual fuel generator units, with a combined net export capacity of approximately 115.5 megawatts, while the transmission system will consist of 132 kilovolt transmission lines.

The joint venture is part of a larger power project in the Eastern Goldfields, which is the subject of another licence application by Zenith Energy to the ERA.

On 31 July 2026, the ERA published the licence application summary for public comment. No submissions were received.

The ERA decision, licences and the licence area map are available on the ERA website.
