Limit Advice and Constraint Equation Review 2025

Final report

The Economic Regulation Authority has published its final report for the [Limit Advice and Constraint Equation Review 2025](#). The review assessed how effective the Limit Advice developed by the network operator and the Constraint Equations formulated by the Australian Energy Market Operator (AEMO) are in meeting the State Electricity Objective and good electricity industry practice.

Constraint equations are mathematical representations of network (and other) limits and are used in the dispatch of electricity.

The ERA must undertake the first review within two years of the New WEM Commencement Day, as required by the Electricity System and Market Rules, clause 2.27C.6(a).
