Zenith Energy

Decision to grant electricity generation licence and electricity distribution licence

The Economic Regulation Authority has granted electricity generation licence EGL40 and electricity distribution licence EDL11 to Zenith Energy (EGP RPPA) Pty Ltd.

The licences relate to the renewable generation component of the Eastern Goldfields Power Project, which includes a 110.4 megawatt (MW) solar farm and a 256 MW wind farm. The project will also include a 138 MW/300 MWh capacity battery energy storage system, which does not require a licence from the ERA.

A 33-kilovolt distribution system will connect the renewable generating works and battery to the project's transmission system. The renewable generating works and distribution system will be located 10 kilometres north-east of Kalgoorlie.

The Eastern Goldfields Power Project also includes a dual-fuel thermal power station project that Zenith Energy will deliver in a joint venture with Northern Star Resources. On 27 October 2026, the ERA announced that it had granted electricity generation licence EGL39 and electricity transmission licence ETL10 to Zenith Energy (EGP JV) Pty Ltd for this component of the project.

On 10 August 2026, the ERA published Zenith Energy (EGP RPPA) Pty Ltd's licence application for public comment. No submissions were received.

The ERA decision, licences EGL40 and EDL11, and the licence area map are available on the ERA website.
